

# HR Data Analysis Project

## Overview

Welcome to the HR Data Analysis project repository! This project focuses on leveraging Power BI for insightful Human Resources analytics.

## Steps Performed

1. **Data Import:** Imported raw data from Excel to Power BI for seamless analysis.
2. **Transformation:** Utilized Power Query for data transformation, ensuring clean and structured datasets.
3. **KPI and Charts:** Created multiple Key Performance Indicators (KPIs) and charts for a comprehensive view of workforce dynamics.
4. **DAX Magic:** Employed DAX (Data Analysis Expressions) functions to derive additional measures, including Average Salary, Average Leave Balance, Greater Than Average Salary by Department, and personalized greetings based on time.
